EDUCATION

Software Engineering Technology   2018 - Present
Centennial College, Toronto, ON

Projects:
- Built a simple website along with creating a real estate website that has house information, contacts, and different sections using HTML5. CSS is used for designing the sites.
- Built multiple sites using HTML5 and JavaScript including CSS. Sites created includes a BMR calculator with imperial and metric option of calculation, dynamic table generator that generates tables according to the entered rows and columns needed, photo gallery, ghost catcher canvas game.
- Collaborated with a group and created an agile project Calorie Counter Application. The application addresses the problem of being unable to keep track of the number of calories one person is taking in. This will benefit those who want to keep track for health or dieting reasons.

Relevant Courses:

Programming 1 & 2	Web Interface Design	Unix/Linux Operating Systems
Introduction to Database Concept	Client-Side Web Development	Software Engineering Methodologies 1

Bachelor of Information Technology (Computer and Communication Networks)   2018 - 2020
Centennial College, Toronto, ON

Projects:

- Built a small network that developed the IPv4 Address Scheme, subnetting, Building the network topology using packet tracer, configuring IPv4 device and the security settings, and tested the end-to-end connectivity successfully.
- Created C# code that developed a college student registration system that allows to enter the user information and interacts with UI that displays the processed data as specified in the application requirements.
- Created an SQL code that developed a table with information about a school e.g. student, teacher, room, etc. information. Inserted data in the table. Connected tables to each other using primary and foreign key then came up with questions that will output information about the school.
- Developed a Java application for a network admin team that allows administrators to enter lab information, lab equipment information, and technician information, assign technicians to labs, display results, etc. It also used an array code to output multiple information that the user entered.

Relevant Courses:

Database and Design and Modeling	Linux/Unix Operating Systems	Server-Side Scripting
Routing and Switching	Computer and Network Security	Object Oriented Programming
